local benefit in regard to the populato n, secures the prosperity and permalar enterprises do. Many places, owing fluttered by every projected scheme. give birth to another city, may give the death blow to the former; not so, however, with the place where great industries like cotton manufacture are carried on. Here the railroad is reduced states a cheering activity manifesting

Reporter copies the above, and comments as follows :

"Of course any saving that can be effected in turning our cotton into goods is to be hailed as a boon to the whole country; and, therefore, no matter where our cotton manufactories now center, it would be a welcome moveabout the ability of the south to compete with New England in manufactuduction of fine goods, and even many varieties of heavy fabrics, then there are requisites of climate, markets, labor, social condition and proximity to financial centers, which the south does not and cannot meet. The success of the south in manufacturing already realized is very gratifying. It shows that there are certain things in that branch of industry which it can accomplish, and it is the true policy of that section to push its advantages as far as possible; but to assume the broad position that "mills must come to the cotton" is to pave the way to a huge disappointment. Experience has very conclusively demonstrated that the climatic and social conditions that attend the growth of cotton are widely different from

hose that belong to its manufacture." sonable as luxury. It means pure air service at table, which leaves one able that diviner mood, that loftier air." WINTER LETTUCE.-A writer in the

Journal of the Farm says all that is

necessary to have lettuce through the

winter is to build a frame out of course

glas sash, and to place it in a sunny

spot, somewhat protected. In this

apart, in good ground, and keep them

properly watered. They will grow all

winter, and in the early spring will

form beautiful large heads to encourage

the appetite and grace the table. The
